

TIG Brush

Ensitech TIG Brush featured on myFEN.com.au

28 July 2009

Ensitech's TIG Brush is an alternative to using pickling paste for cleaning stainless steel welds.

High-temperature brush provides electrical energy to stainless steel surface.

The unit uses a high-temperature brush to provide electrical energy to the surface of stainless steel.

The use of temperatures activates a mild solution, which removes discolouration and restores corrosion-resistant properties of stainless steel in the heat-affected zone surrounding TIG welded joints.

The tip design allows welds of all shapes and positions to be easily reached and cleaned.
